DETAILED ACTION

Response to Arguments

Applicant's arguments filed 9/25/08 have been fully considered but they are not persuasive. Applicant amends the independent claims to include the language "in contact" in reference to the additional layer and the substrate. However, the specification does not support this amendment. Further, the limitation "in contact" is met in the applied reference ('752).

Applicant's arguments filed 9/25/08, with respect to Hosada have been fully considered and are persuasive. The 102 rejection has been withdrawn.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-7, 9-11, 13-23 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification does not support the amendment to the claims adding the limitation that the additional layer is "in contact with the carrier substrate". In paragraphs [0048-55] describing the additional layer, there is no mention that the layer is in contact with the substrate. In fact, the specification allows for the additional layer to be on either side of the recording layer.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7, 9-11, and 13-23 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by US 6,033,752.

The reference discloses a recording medium comprising a recording layer formed of two layers which form an alloy when exposed to a write beam. See col. 7. The layers are formed of the claimed materials. The recording layers are formed between two substrates (2, 7). The medium may be double-sided and include a spacer layer. See Figure 4. The medium includes dielectric layers on either side of the recording layer and reflective layer. (See bedding layer, protective layer, a dielectric layers in col. 9-10). The claims are amended to include the limitation of an additional layer being in contact with the substrate. The additional layer, as defined in the claims, includes a metal sub-layer. This is seen to be equivalent to the protective layer and reflective layer described in the reference in col. 10-11. The protective layer/reflective layer combination can be called an “additional layer” where the “additional layer” is in contact with the substrate 7.
